No. 6
December 2024

■ We are proud to share some updates we wrapped up the year with!

This past December, we had the pleasure to welcome *Marvin H. Weintraub* back to our facility for another productive visit. Over two weeks, Marvin collaborated closely with our team, overseeing manufacturing processes and conducting rigorous tests to ensure top-notch results.

Together, we focused on the development of ground breaking formulations, including:

- **Copper-Free Formulation**, tailored for our clients in the United States, Canada and Europe aligning with evolving industry standards.
- **Carbo-Ceramic Formulation**, designed to enhance the friction coefficient of ceramic brakes, setting new benchmarks in performance.

These efforts culminated in the production of samples now in route to the U.S. for testing. We are excited about the potential launch of these innovations in the coming months, reflecting our commitment to pushing boundaries and delivering excellence.

Stay tuned as we continue to innovate and drive progress in the brake industry!
